The Rick Hansen Institute Global Research Platform (RHI GRP) is a secure, web-based data collection and data warehousing platform that makes the technology component easy, while increasing the quality of data collected. This is the system to use if you are looking for:

- An elegant solution to data collection
- High quality data with minimal staff training
- High data security with no effort, even when using iPads or other mobile devices
- Control of your research projects without depending on technical staff
- A swift transition from paper forms to live international multi-site data collection in as little as one day

**HOW DOES IT WORK**
Better data, faster and easier:
- Easy study definition and set-up
- Clean and simple interface for data entry
- Immediate data validation upon entry
- Centralized data for easier reporting & monitoring
And our high-security hosting environment keeps data safe and secure, and completely within Canada.

**HOW TO GET STARTED**
Simple steps to get a study up and running:
1. Define your study with the RHI GRP Study Builder (in Excel spreadsheet format) or let us do it – just give us your paper forms
2. Import the spreadsheet into RHI GRP
3. Set the user permissions for each site (1 or more)
4. Now you are live

**BACKGROUND**
As a Rick Hansen Institute innovation, the RHI GRP is designed to help accelerate research by providing an easy, flexible platform to help researchers run studies with a minimum of effort and funding. In production since 2011, GRP runs in more than 20 multi-site studies, national registries, single-site quality improvement studies and international studies. It currently includes more than 5,000 individual study participants. International collaborations are underway with research groups in the United States, Europe, Australia, China, Israel, New Zealand and others. RHI GRP has flexibility, usability, scalability, and high security.
